CLAIMS

- 1. (Currently Amended) A blister pack for receiving and containing an article to be packaged comprising a front part having a recessed portion, a back part having a relieved portion adapted for insertion into the recessed portion of the front part for closure of the pack, and co-operating locating means on the front and back parts respectively to maintain the pack in a closed condition; wherein the locating means comprises an abutment on the inner wall surface of the recessed portion of the front part, and a co-operating abutment on the outer wall surface of the relieved portion of the back part, the inner and outer wall abutments being located thereon such that they become inter-engaged to close the pack only when the back part is contained wholly within the recessed portion of the front part; the abutment on the inner wall surface of the recessed portion of the front part extends inwards from said wall surface [to a greater extent] to at least as great an extent than that by which the abutment of the relieved portion of the back part extends outwards from the outer wall surface thereof.
- 2. (Original) A blister pack according to Claim 1, wherein the front part has a flange extending around the rim of the recessed portion.
- 3. (Original) A blister pack according to Claim 2, wherein the flange includes an aperture for suspension of the blister pack upon a display hook.
- 4. (Previously Presented) A blister pack according to Claim 2, wherein the flange includes a deformation of material in a peripheral region to provide the appearance

- 3 of a weld when the abutments are inter-engaged.
- 5. (Previously Presented) A blister pack according to Claim 1, wherein the
- 2 abutment of the front part comprises a continuous ridge protruding inwardly from the
- 3 wall surface of the recessed portion.
- 6. (Previously Presented) A blister pack according to Claim 1, wherein the
- 2 abutment of the back part comprises a continuous narrow flange protruding outwardly
- 3 from the relieved portion.
- 7. (Previously Presented) A blister pack according to Claim 1, wherein the front
- 2 and back parts of the pack are connected together by an integral hinged portion, the entire
- 3 pack being formed by deformation of a single sheet of translucent plastics material.
- 8. (Previously Presented) A blister pack according Claim 1, wherein the front
- 2 part, on its inner or outer surface, has a surface texture to render the front part translucent
- 3 with reduced transparency.
- 9. (Original) A blister pack according to Claim 1, wherein the front part has a
- 2 stepped recess forming a plinth with an outer flange extending peripherally around the
- 3 plinth.
- 1 10. (Previously Presented) A blister pack according to Claim 1, wherein the
- 2 respective abutments of the front and back parts become inter-engaged with a snap action
- 3 when the pack is closed.
- 1 11. (Canceled)
